

CLUSTER:ELECTRONICA

EVENT:ELECTROCLASH

Round 1:

This round consists of identification of logos, connection of circuits, and identification of scientists and their contributions. In the first segment, incomplete logos of certain companies will be displayed on the board, participants have to find the name of the logos.

The second segment consists of connecting the nodes. Here the students should connect the similar nodes without intersecting the connection of other two similar nodes.

In the third segment the photographs(lab and electrical instruments) will be displayed, participants should identify the respective names of the instruments from the photographs.

Round 2:

This round consists of some questions and many pictures will be displayed on the board, a question will be asked to the participants(time limit of 30 sec), those who answer correctly can choose anyone of the pictures that are displayed on the screen and the question regarding that picture will be asked(time limit of 30sec), those who answer correctly will be given marks. Negative marks of (-1) will be awarded for wrong answer those who select the common pictures and no negative marks for the wrong answer those who select the different pictures.

Round 3:

In this round initially 8 (or) 10 topics will be displayed on the screen. Each team have to select individual topic. After selection of topics each team have to prepare their own questions on the all topics which are selected by all the teams . Organizers will ask the questions to each team on their respective topic, if they answer they will get the points, if they answer wrong negative points are given to them.

After giving the answer the team which was asked by the organizers have a chance to ask the questions to other teams which were prepared by them, if the other team answers the questions they will get the points or else the team which had asked the question will get the point.

Number of participants per team:2
